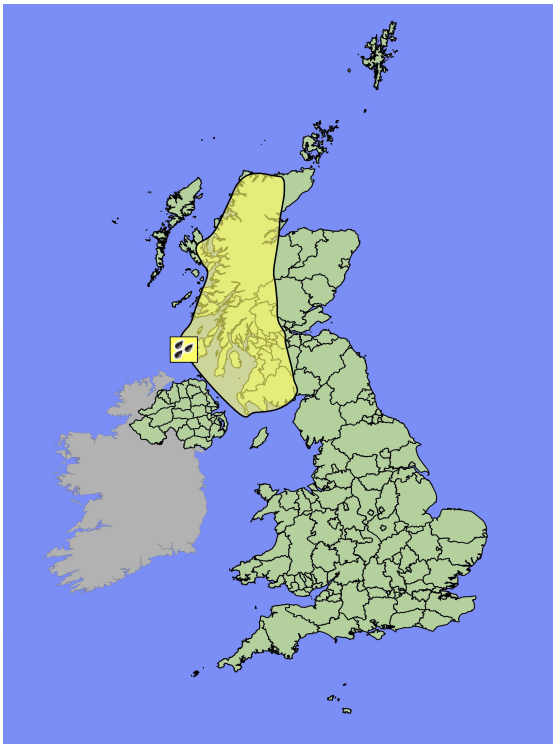
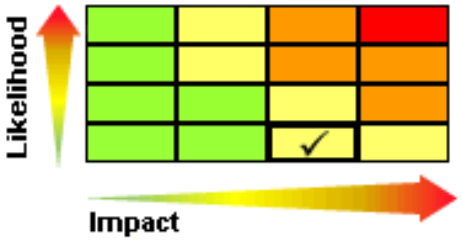
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure located near to western Scotland will allow the development of scattered, slow moving showers on Wednesday. Some will be thundery and accompanied by torrential downpours with a risk of surface flooding. Although confidence in the development of these heavy showers across the area is high, confidence in their exact location is low and it is likely that some places will miss them.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **09:00 on Wed, 08th Jun 2011** until **23:59 on Wed, 08th Jun 2011**

Slow-moving heavy showers will affect parts of Western Scotland during Wednesday. These may give 15 to 25mm of rain within an hour or two, with a risk of surface flooding. The showers are expected to ease overnight.
